

Coupled with CE Software, our mobile solutions simplify daily tasks and planning for field personnel, while providing management the real-time reporting needed to make effective and timely decisions. Our preferred Toughbook of choice is the very rugged Panasonic G1 tablet. This device is designed to operate in harsh environments and has very good warranty management.

The CE mobile solution is not required to implement the Completions & Commissioning System (CCMS), but can be used to simplify punch listing, collection of equipment information, and execution of paperless tasks from the field - with or without Wi-Fi connections readily available.

Our mobile applications provide field personnel access to content located in a database located on your company's intranet or through a Hosted internet solution.

Specifically, the mobile solution is used to:

- Retrieve detailed equipment information
- Retrieve any uploaded document (e.g. P&IDs, Datasheets)
- Enter punch list items in the field (w/ as-found / as-left images)
- Execute Installation Checks without paper
